terrà un seminario dal titolo:

“Entropy methods in interacting particle systems”

Abstract:

We develop a variational formula to estimate the moment generating function of additive functionals of Markov processes. Combined with a related variational formula for the evolution of the relative entropy of the law of the process with respect to suitable reference measures, this variational formula serves as a substitute for the martingale method pioneered by Kipnis-Varadhan in the case of out-of-equilibrium interacting particle systems.

Tutti gli interessati sono invitati a partecipare.
