SEMINARIO DI MATEMATICA

Martedì 18 dicembre 2018
ore 14:00

Scuola Normale Superiore
Pisa
Aula Bianchi Scienze

Thierry Paul
(Ecole Polytechnique, Francia)

terrà un seminario dal titolo:

“Quantum Wasserstein “distances” and optimal transport”

Abstract:

I will define a quantum analogue to the Wasserstein distance of order two between density operators, namely positive trace one operators on Hilbert spaces. I will give first properties, in particular the link with usual Wasserstein distance between positive symbols of the quantum densities and show how they define a topology more adapted to the classical limit than the one defined by Schatten classes. Finally I will present recent results obtained with E. Caglioti and F. Golse concerning a quantum version of the Brenier optimal transport Theorem.

Tutti gli interessati sono invitati a partecipare.
